

REQUIREMENTS REVIEW

Client Brief vs. Delivered Scope

A line-by-line comparison of the client's ChatGPT-generated website brief against what has actually been built for Conglomerate Appraisal Consultancy (CAC) – separating real, deliverable requirements from AI-inflated scope creep.

Why This Review Exists

The client forwarded a long series of ChatGPT conversations and asked that the website follow them. This document filters that material into three honest categories, checked directly against the live codebase – not assumed from memory.

The forwarded material covers two very different things: (1) a genuinely useful description of what a property forensic investigation involves, written as client-facing copy, and (2) an open-ended AI brainstorming session about what the *website* could eventually become – which escalated, unprompted, from a single-page brief into a proposal for a 25–40 page investor-grade site plus a "300–500 page corporate branding package," a client portal, an AI search dashboard, a mobile app, and blockchain verification.

Treating both halves as equally binding is how a design-polish request quietly turns into an unscoped software project. This report keeps them separate, so the next conversation with the client is grounded in what exists, what's genuinely missing, and what belongs to a different engagement entirely.

HOW TO READ THIS DOCUMENT

Section 2 shows what the ChatGPT brief asked for that is already live on the site today. Section 3 lists the small, genuinely worthwhile additions. Section 4 lists what should not be built under the current engagement, and why. Section 5 answers directly: do you have grounds to push back on the client – and what to say.

What the Brief Asked For That Already Exists

Cross-checked against the live [CAC](#) codebase (not the client's memory of it, and not ChatGPT's assumptions).

REQUESTED IN THE BRIEF	STATUS	WHERE IT LIVES
12 services covering the full investigate → resolve → sell lifecycle (forensic, family estate, missing property, asset tracing, title investigation, fraud investigation, legal coordination, property sale, buyer matching, investment & renovation consultancy)	Live	/services — 12 disciplines
"Turning Intelligence Into Evidence" corporate slogan	Live	Hero banner + footer, every page
"Discovering the Past • Protecting the Present • Securing the Future"	Live	Footer, every page
Step-by-step investigation process	Live	/process — 8-stage timeline
About Us: story, vision, mission, core values, founding date	Live	/about
"Why Choose Us" / trust & credibility section	Live	/why-cac
Contact page with WhatsApp + direct enquiry form	Live	/contact
Headline track-record figures (years established, cases completed)	Live	/about (moved here per client's own follow-up request)
FAQ section	Not present	—
Case studies / testimonials	Not present	—
Knowledge Centre / articles / blog	Not present	—

Recommendation: Lead with this table when you next speak to the client. Almost everything he can point to in the ChatGPT brief as "content" is already built. The real gap between the brief and the live site is not content — it's the fantasy feature list in Section 4.

Small, Genuinely Useful Additions

Not everything in the brief is scope creep. A few pieces are well-written, low-effort, and worth using.

- **FAQ block** – the client's ChatGPT draft includes four solid, plain-language questions and answers ("Can your reports be used in court?", "Can you investigate old land titles?"). These slot into the existing [/why-cac](#) or [/contact](#) page as a short accordion – a half-day addition, not a new page.
- **A one-line "sample report structure" credibility note** – the investigation-manual content (Executive Summary → Background → Findings → Recommendations) is good proof-of-rigor copy. A short mention on [/services](#) or a service detail page ("every engagement concludes with a structured forensic report") reinforces credibility without building a document viewer.
- **Industries served list** (law firms, estate administrators, executors, trustees, financial institutions) – a compact strip, reusing the existing card components already on the site.

SCOPE

All three fit inside the current design-polish engagement. None require a new page, a new route, or new infrastructure.

What Belongs to a Different Project

The brief’s later messages describe an enterprise software platform, not a marketing website. Each item below is a genuinely different engagement – different scope, timeline, and budget.

PROPOSED	WHAT IT ACTUALLY IS
Client Portal (secure login, document upload, case tracking)	An authenticated web application with a database and user accounts – months of backend work, not a page
AI Property Search Dashboard	A search product requiring a real data source (land registry API access, which likely doesn't exist for public/commercial use in Malaysia)
Admin Control Panel	Internal staff tooling – a second, separate application
Native Mobile App (iOS / Android)	A distinct codebase, app-store accounts, and ongoing maintenance
Blockchain Property Verification	Not a real product for this market; adds complexity with no client-facing benefit
International Investor Portal	Undefined audience, undefined legal/compliance scope
25–40 page "investor-grade" website	ChatGPT's own page count inflated across its replies (20 → 25 → 35–40) with no scope, budget, or content basis given each time
"300–500 page corporate branding package" (brochures, business cards, pitch deck, office signage, social media kit)	A full brand agency engagement, unrelated to a website build

Action: Don't silently absorb these into the current build. If the client wants any of them, they need to be quoted and scheduled as their own project.

Yes – and Here's the Basis

Direct answer to the question you asked: yes, there is a real, defensible case here. Four points, in order of how persuasive they are.

- 1 The client's own direct instructions were narrow.** His actual WhatsApp requests were about presentation – "make viewer say wow," 3D imagery, icons, colour palette. He never asked, in his own words, for a client portal, an AI dashboard, or a mobile app. Those came entirely from a ChatGPT brainstorm he forwarded as "reference," not from his own requirement.
- 2 ChatGPT's own scope kept inflating itself, unprompted.** Across the conversation it went from a single homepage draft, to a "20-page site," to "25 pages," to offering a "300–500 page corporate branding and website design package" – each time with no question asked about budget, timeline, or what's technically realistic. That's a known pattern (an assistant agreeing to escalate rather than push back) – not a scoped client requirement.
- 3 The content gap is nearly closed already.** Section 2 shows the real, usable parts of the brief – the actual business description, services, and process – are already live. What's left over almost entirely fantasy infrastructure (Section 4), not missing marketing content.
- 4 A portal/AI/mobile-app buildout is a different kind of work entirely** – ongoing hosting, auth, data sources, app-store maintenance – not a "few more pages" on the current site. Scoping it separately isn't a refusal; it's accurate project classification.

Recommendation: Don't argue this verbally. Send the client this comparison (or a plain-language summary of Sections 2 and 4) so the reset happens on paper. Frame it as: "here's everything from your brief that's already live" first, so the conversation starts from a position of delivered work, not from defending against the feature list.

SUGGESTED TALKING POINT

"Everything you can point to as content in that ChatGPT brief is already on the site – the 12 services, the process, the about page, the taglines. The portal, AI search, and mobile app aren't website features, they're separate products with their own timeline and cost. Let's finish the design polish you originally asked for, and treat those as a phase two if you want to move forward with them."

Recommended Path Forward

- 1 Share Section 2** with the client first — resets the conversation on delivered work, not gaps.
- 2 Offer the Section 3 additions** (FAQ, report-structure note, industries list) as quick wins inside the current scope.
- 3 Name the Section 4 items explicitly** as future-phase, separately-quoted work if he wants to pursue them.
- 4 Keep the active scope to what he actually asked for:** the design "wow" pass and the icon customisation — both already in progress on [/services](#), the stats sections, and the homepage.

Deliver the brief the client gave you – not the one ChatGPT invented for him.
